

## **AMENDMENT TO THE SPECIFICATION**

Please add the following new paragraph at page 7, line 23 of the clean copy of the specification as previously submitted:

As shown in Fig. 2, the driving magnet 4 and the driving coil 7 are disposed substantially within a quadrant circumference of the lens. In addition, the main yoke 5, and the opposite yoke 6 are similarly disposed in the same quadrant circumference, freeing nearly three-fourths of the cross-sectional area of the lens driver apparatus for use in mounting other optical devices, such as an iris unit. As shown, the occupied quadrant is from about 90 degrees to 180 degrees for the orientation shown in which the uppermost vertical top of the actuator is at 0 degrees.
